ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a cooling cosmetic which scarcely irritates skins, can impart a sufficient cooling touch over a long time and hardly generates a characteristic smell by combining a specific amount of a menthol derivative with a specific amount of menthol or camphor and a lower alcohol.

SOLUTION: This cooling cosmetic contains (A) a menthol derivative (preferably L-menthyl glyceryl ether and/or L-menthyl lactate) in an amount of 0.5-5 wt.% based on the total amount of the cooling cosmetic, (B) menthol and/or camphor in an amount of 0.05-1 wt.% based on the total amount of the cooling cosmetic, and (C) a lower alcohol. The component C is preferably ethanol and is preferably contained in an amount of 2-50 wt.% based on the total amount of the cooling cosmetic. The cosmetic is preferably further mixed with (D) a polyhydric alcohol (preferably glycerol, 1,3-butylene glycol). The component D is preferably further mixed in an amount of 0.1-20 wt.% based on the total amount of the cooling cosmetic.
